

# Microscarium

Enter the world of the **microscopic** with our intrepid Dr. Menton on a journey through a landscape filled with **ferocious-looking** creatures that move rapidly through the dense jungle of their aquatic home, hunting for something to eat. From single-celled protozoa that accomplish many of the same functions as humans, to the more **complicated creatures** sucking in anything that comes near them, you will be thrilled by this trip through the wondrous (and sometimes scary) microcosm created by our awesome Creator God.
